DRAG THE VOLUME

When adjusting your iPhone's volume, press the side volume button once and then control the onscreen volume bar with your finger.

Not only is this a quicker way to increase or lower the volume, it also gives you a lot more control to help you find your sweet spot, similar to a long press* of the volume bar in Control Center.

Please note:

A "long press" is when you hold your finger on a button for an extended amount of time.
