DIFFERENT VOLUME FOR DIFFERENT ANDROID APPS

Android has a in-built feature that allows you to automatically adjust different volume for different apps, such as your Ringtone, Media functions, Notifications, System Sound, Alarms, etc. This feature ensures you don't have to wake up to your alarm at the same volume that your phone rings at.

Here is how to do it:

- Press the Volume Up key on the side of the phone or in 'Settings' (you can use either way)
- Now tap on the 3 Dots at the top.
- Now you can adjust volume of Ringtone, Media functions, Notifications and System Settings, etc.
